Office Action Summary

Application No.

09/258,407

Applicant(s)

CHEAITO ET AL.

Examiner

Simon Sing

Art Unit

2645

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 09 January 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-30 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-30 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s) _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1. Claims 1, 2, 5, 7, 9-22, 24-26, 28 and 30 are rejected under 35 U.S.C. 102(e) as being anticipated by Gurbani et al. US 6,282,275

1.1 Regarding claims 1, 15 and 17, Gurbani discloses a telephone caller identification log with Internet access in figure 1. Gurbani's system comprises:

a subscriber telephonic device 104 connected to a switched telephone network

110;

a caller ID server [data logging unit] 124 in the switched telephone network (column 5, lines 47-51), the caller ID server 124 storing caller identifying information upon a call to the telephone 104 from a caller telephonic device 102 (column 2, lines 44-63), the caller ID server 124 connecting to a telephone network 110 allowing a subscriber, using a computer 130 to access the caller ID server 124 via the telephone network 110 (column 3, lines 28-43), wherein the caller ID server 124 has a database for storing the caller identifying information (column 2, lines 59-63), and has a gateway for connecting the caller ID server 124 from a switched telephone network to the Internet (column 5, lines 47-51), wherein the caller identifying information is accessible through the gateway via the Internet by computer 130 (column 3, lines 28-43).

Gurbani teaches requiring authentication, such as a password, for accessing the caller ID server 124 (column 3, lines 37-43). Gurbani further teaches that the computer is an Internet phone [telephonic device] and the caller identifying information has a field enabling a user to call back a caller by dial back a number in a retrieved list (column 2, lines 12-16; column 4, lines 5-16).

1.2 Regarding claim 2, Gurbani teaches that the caller telephone 102 and the subscriber telephone 104 are connected to the same telephone network 110 as shown in figure 1.

Art Unit: 2645

1.3 Regarding claims 5 and 19, the caller ID server 124 is local to a SSP since the subscriber's switched telephone network, since subscriber telephone 104 and caller ID server are both connected to the same telephone network 110 (Figure 1).

1.4 Regarding claim 7, as discussed in claim 1, the caller ID server 124 has a gateway connected to Internet 128, and the caller identifying information is accessible through the gateway via Internet.

1.5 Regarding claims 9 and 20, Gurbani teaches that the caller ID server 124 is in a SCP (column 5, lines 47-51).

1.6 Regarding claim 10, as discussed in claim 1, the caller ID server has a gateway connected to Internet 128, and the caller identifying information is accessible through the gateway via Internet.

1.7 Regarding claims 11 and 12, the caller ID server 124 has a storage medium for storing caller identifying information (column 2, lines 59-63).

1.8 Regarding claims 13, 14 and 16, as discussed in claim 1, Gurbani teaches accessing the caller ID server via computer 130, which is a telephonic device (Internet phone) and it is inherent that computer 130 needs a Internet provider to access the Internet.

1.9 Regarding claim 18, Gurbani teaches that the caller ID server stores the caller identifying information upon a call to the subscriber telephone 104 (column 2, lines 44-63).

1.10 Regarding claim 21, Gurbani teaches that a greeting message to alert the subscriber of success in reaching the caller identifying information (upper window of Figure 2A).

1.11 Regarding claims 22 and 24, Gurbani teaches reviewing and deleting [editing] caller identifying information (column 3, lines 56-67).

1.12 Regarding claim 25, it is inherent that the menu has a command to save the caller identifying information, since Gurbani teaches that the caller identifying information is displayed on an interactive display of computer 130 (column 2, lines 12-16), and a user is able to delete an entry on a caller list (column 3, lines 64-67).

1.13 Regarding claim 26, Gurbani teaches storing the caller identifying information in an area of call ID server 124 (column 2, lines 59-63). It is inherent a server has at least one hard disk for storing data.

Art Unit: 2645

1.14 Regarding claims 28 and 30, Gurbani discloses a telephone caller identification log with Internet access in figure 1. Gurbani teaches:

a caller ID server 124 [data logging unit] for storing caller identifying information upon a call to the telephone 104 from a caller telephonic device 102 (column 2, lines 44-63). The caller ID server 124 is connected to a telephone network 110 allowing a subscriber, using a computer 130 to access the caller ID server 124 via Internet 128 (column 3, lines 23-67; Figure 2).

Gurbani further teaches that the computer is an Internet phone [telephonic device] and the caller identifying information has a field enabling a user to call back a caller by dial back a number in a retrieved list (column 2, lines 12-16; column 4, lines 5-16).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 3, 4, 6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gurbani et al. US 6,282,275 in view of Valentine US Patent 5,898,770.

Art Unit: 2645

2.1 Regarding claims 3 and 4, Gurbani discloses a caller ID server [data logging device] in a subscriber's switched telephone network for logging caller identifying information, but fails to specifically teach that the subscriber switched telephone network and the caller switched telephone network are two separate switched telephone networks and there is line connecting the two switched telephone networks for transferring the caller identifying information.

However, Valentine discloses a caller ID logging unit (CLD 100) for logging caller IDs (column 3, line 59 to column 4, line 7) in figure 1. Valentine also discloses lines (18 and 22) for connecting caller's local exchange 20 to a called party's local exchange 14 and transferring a caller's ID to CLD 100 (column 3, lines 29-41, 59-67; column 4, lines 1-7. Valentine teaches that his invention may be used in conjunction with any routing network, including SS7 (column 3, lines 33-41) and wireless (column 6, lines 27-32).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify to modify the Gurbani's reference with Valentine's teaching so that there would have been a line connecting the subscriber's switched telephone network and a caller's switched telephone network, which would have been a SS7 line or a wireless link, for transmitting caller's identifying information to the caller ID server 124, because such modification would have enabled a caller from other switched telephone network to call the called party telephone 104 have its caller ID logged in the caller ID server 124.

Art Unit: 2645

2.2 Regarding claim 6, Gurbani discloses a caller ID server [data logging device] in a subscriber's switched telephone network for logging caller identifying information, but fails to specifically teach that the caller ID server 124 is connected to an intelligent peripheral.

However, Valentine discloses a caller ID store 108 located in SCP 172 (column 5, lines 64-67), which is connected to an IP (figure 3).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the Gurbani's reference with Valentine's teaching so that the data logging unit would have been connected to an IP, and inherently would have had a line peripheral for interconnection, because connecting the caller ID server 124 to an IP or to a SCP 122 would have been a matter of design choice within an AIN switched telephone network.

2.3 Regarding claim 8, as discussed in claim 1, the caller ID server 124 has a gateway connected to Internet 128, and the caller identifying information is accessible through the gateway via Internet.

3. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gurbani et al. US 6,282,275 in view of Rogers et al. US 5,946,386.

Gurbani discloses a caller ID server [data logging device] in a subscriber's switched telephone network for logging caller identifying information presenting a menu of commands, but fails to specifically teach the menu is a screen pull down menu.

However, Rogers discloses a user's call log (Figure 9), residing in a call management computer 101, from a local computer 114 or from a remote (work at home) computer 114 through Internet (column 42, lines 11-13, 22-26, 29-32; column 7, lines 13-19). The call management computer is within a switched telephone network (between a central office and a PBX as shown in figure 1). Rogers teaches that an option [command] menu is a pull down menu (Figure 9).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the Gurbani's reference with Roger's teaching so that a command menu would have been a pull down menu, because such a modification would have been a matter of design choice.

4. Claims 27 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rogers et al. US 5,946,386 in view of Bowater et al. US 6,282,269.

Rogers teaches accessing a user's call log, residing in a call management computer 101, from a local computer 114 or from a remote (work at home) computer 114 through Internet (column 42, lines 11-13, 22-26, 29-32; column 7, lines 13-19). The call management computer is within a switched telephone network (between a central office and a PBX as shown in figure 1), and the call log has an indicator "VM" for indicating a call sent to voice mail (figure 9, call indicator 905; column 42, lines 38-43). Rogers further teaches voice over the Internet (column 9, lines 47-52), and retrieving a voice mail message by a click of a mouse (column 45, lines 9-20). Rogers fails to teach that the work-at-home computer 114 is a telephonic device.

However, Bowater discloses an Internet phone in figure 3 (column 6, lines 8-16). Bowater teaches that a computer with appropriate application software is an Internet phone (column 7, lines 12-23; column 8, lines 7-10), and the Internet phone is used to retrieve a voice mail message (column 11, lines 37-51).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the Rogers' reference with the teaching of Bowater, so that a user work-at-home computer would have been an Internet phone and would have been able to retrieve a voice mail message over the Internet, because such modification would have clarified the teaching of Rogers for voice over Internet and retrieving a voice mail message by a click of a mouse.

Response to Arguments

5. Applicant's arguments with respect to claims 1-30 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

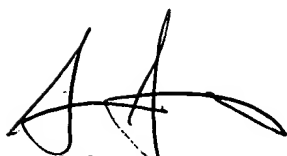

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2645

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Simon Sing whose telephone number is (703) 305-3221. The examiner can normally be reached on Monday - Friday from 8:30 AM to 5:30 PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang, can be reached at (703) 305-4895. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9314. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-4750.
